

Miriam Cebey graduated in Pharmacy in 2009 (USC-University of Santiago de Compostela). She finished the master's degree in Research and Drug Development in 2010 (USC). While she was studying she did a research in CNS pharmacology, focusing on *in vivo* experiments with potential antidepressants molecules. She is a member of the Spanish Society of Pharmacology. In 2011 she joined the GENVIP research group of Institute of Santiago de Compostela (IDIS) as a PhD student, obtaining a competitive pre-doctoral fellowship in this year. Her current main research is in GENDRES project about the role of genetics and vitamin D levels in individual susceptibility and prognosis of acute viral respiratory infection in childhood. In this project she has also coordinated the network participation and sample/data management. She also collaborates actively in the FP7 EUCLIDS Project. Miriam has a wide experience in Clinical Trials from phase I-III in which she has participated as Data Manager and Study Coordinator.
